KRUSHNA NOLE

Computer Science & Engineering (AI & ML) Undergraduate — Software & Applied ML

Navi Mumbai, Maharashtra, India | +91 85915 90309 | krushnanole433@gmail.com | linkedin.com/in/krushna-nole | github.com/Kruxhna | kruxhna.vercel.app

SUMMARY

Computer Science & Engineering (AI & ML) undergraduate (Class of 2028) with strong foundations in Data Structures, Algorithms (300+ problems solved), and object-oriented programming in Python and C++. Experienced in engineering computer vision pipelines, distributed local LLM inference setups, automated ETL utilities, and cross-platform mobile applications.

EDUCATION

Vishwaniketan Institute of Management, Entrepreneurship & Engineering Technology (VIMEET) Expected June 2028
B.E. in Computer Science & Engineering (AI & ML) — Navi Mumbai, MH | **CGPA: 7.36 / 10.0**
Relevant Coursework: Data Structures & Algorithms, Machine Learning, Database Management Systems, Operating Systems, Theory of Computation

T.H. Wajekar Junior College, Uran, MH **Mar 2022 – Mar 2024**
Higher Secondary Certificate (HSC) — Science Stream

TECHNICAL SKILLS

- **Programming Languages:** Python, C/C++, SQL, TypeScript, JavaScript, Java
- **Machine Learning & Vision:** PyTorch, Scikit-learn, OpenCV, Hugging Face Transformers, llama.cpp (GGUF Quantization)
- **Data Processing & Analysis:** Pandas, NumPy, Matplotlib, Regular Expressions (Regex), ETL Scripting, Exploratory Data Analysis
- **Development & Tooling:** Git, GitHub, Linux, Docker, React Native, MongoDB, Google Cloud Platform (GCP), Figma

TECHNICAL PROJECTS

Trinetra-v2.0 – Deepfake Video Detection Pipeline | *Python, PyTorch, EfficientNet-V2, OpenCV* **May 2026 – July 2026**

- Engineered a video classification pipeline in PyTorch leveraging a pretrained EfficientNet-V2 backbone for spatial frame-level feature extraction paired with temporal sequence modeling to detect synthetic facial manipulation.
- Automated an OpenCV preprocessing workflow for uniform video frame sampling, face detection, and region-of-interest (ROI) cropping to standardize model training and evaluation inputs.

AeroMESH – Multi-Node Local LLM Inference Setup | *C++, llama.cpp, RPC, GGUF* **July 2026 – Oct 2026**

- Configured a distributed local LLM execution environment using `llama.cpp` and its RPC backend to partition and distribute quantized GGUF model layers across two networked machines when single-device memory is insufficient.
- Evaluated multiple GGUF quantization levels and systematically benchmarked token generation latency and memory utilization across local network nodes.

Glassbox – Forensic Log Parser & Triage Utility | *Python, Pandas, Regex, ETL* **Feb 2026 – Mar 2026**

- Developed an automated Python and Pandas ETL utility to ingest, clean, and normalize unstructured CSV and mobile report dumps into structured, queryable datasets.
- Formulated automated Regex pattern-matching and keyword-filtering rules to categorize communication logs and flag relevant metadata records for rapid triage review.

Aptitude – Cross-Platform Assessment Application | *React Native, TypeScript, Figma* **Aug 2026 – Present**

- Built a cross-platform mobile quiz application in React Native and TypeScript featuring timed assessments, streak tracking, and category-wise score breakdowns.
- Translated modular Figma UI wireframes into responsive mobile views integrated with offline-first local state persistence for practice question banks.

PROBLEM SOLVING & VIRTUAL PROGRAMS

- **Algorithmic Problem Solving:** Solved 300+ Data Structures and Algorithms problems across LeetCode and Codeforces.
- **Deloitte Australia Data Analytics Virtual Case Simulation (Forage, 2025):** Completed a self-paced practical case study involving data cleaning, exploratory data analysis (EDA), and stakeholder dashboard design on sample telemetry records.
