EDUCATION

Vishwaniketan Institute of Management, Entrepreneurship & Engineering Technology (VIMEET), Navi Mumbai, MH **Expected June 2028**

Bachelor of Engineering (B.E.), Computer Science & Engineering (Artificial Intelligence & Machine Learning)

- CGPA: 7.36 / 10.0
- Relevant Coursework: Data Structures & Algorithms, Machine Learning, Database Management Systems, Theory of Computation, Operating Systems

T.H. Wajekar Junior College, Uran, MH **March 2022 – March 2024**

Higher Secondary Certificate (HSC) — Science

- Score: 61.17%

EXPERIENCE

Data Analytics Simulation — Deloitte Australia (Forage Virtual Experience Program) **2025**

Virtual Experience Participant — Remote

- Completed an industry-standard job simulation covering enterprise data analytics, data hygiene, and exploratory data analysis (EDA).
- Analyzed business telemetry to surface patterns and trends, translating complex datasets into actionable insights and structured visualizations for stakeholder review.

PROJECTS

AeroMESH — Distributed LLM Inference Mesh Engine **July 2026 – Present**

C++ · CUDA · llama.cpp · RPC Daemons · GGUF

- Designed a distributed inference engine in C++ using custom RPC daemons to partition model layer weights across networked nodes, bypassing single-device VRAM limitations.
- Built a zero-copy GGUF parser and tensor slicer on shared-memory ring buffers, reducing inter-node serialization overhead by ~35%.

Trinetra-v2.0 — Spatial-Temporal Deepfake Detection System **May 2026 – July 2026**

Python · PyTorch · EfficientNet-V2 · Transformers · OpenCV

- Developed a spatial-temporal detection model combining EfficientNet-V2 frame feature extraction with a Transformer encoder to identify synthetic inter-frame artifacts.
- Automated face tracking, landmark alignment, and frame sampling with OpenCV, delivering an end-to-end video ingestion pipeline processing 30+ FPS.

Glassbox — Digital Forensic Triage & Timeline Engine **February 2026 – April 2026**

Python · Pandas · Forensic Parsing · Regex · Data Ingestion

- Engineered a lightweight forensic triage engine in Python to ingest, parse, and normalize multi-gigabyte UFDR (Universal Forensic Data Extraction) and CSV mobile data dumps.
- Implemented keyword scoring and pattern-matching algorithms over communication logs, application artifacts, and system metadata to automatically surface high-priority evidentiary leads.

Aptitude — Gamified Exam Preparation Platform **August 2026 – Present**

React Native · TypeScript · Mobile UI/UX · Figma

- Architected a cross-platform assessment app in React Native with gamification mechanics — adaptive streaks, bite-sized quizzes, and progression loops — to drive daily engagement.
- Translated modular Figma component libraries into responsive mobile layouts, optimizing rendering and gesture interactions for smooth 60 FPS transitions across device resolutions.

- Designed an offline-first state management architecture for rapid question parsing, instant answer evaluation, and category-wise performance analytics.

TECHNICAL SKILLS

AI, Deep Learning & LLMs: PyTorch, TensorFlow, Scikit-learn, Transformers, Hugging Face, llama.cpp, CUDA, OpenCV

AI Domains: Natural Language Processing, Computer Vision, Distributed LLM Inference, Model Quantization, Digital Forensics Triage

Data Science & ML Tooling: Pandas, NumPy, Matplotlib, Regex, Streamlit

Programming Languages: Python, C/C++, Java, SQL, JavaScript

Tools & Infrastructure: Git, GitHub, Docker, Linux, MongoDB, Google Cloud Platform (GCP)

CERTIFICATIONS & ACHIEVEMENTS

- AI Agents Intensive Course (5-Day) — Google & Kaggle
- Prompt Engineering for Everyone — Generative AI & LLM Prompt Design
- AI Chatbots & Virtual Agents — Conversational AI & Agent Architecture
- Data Analytics Simulation — Deloitte Australia (Forage Virtual Experience Program)
- Competitive programming: active problem solver on LeetCode and Codeforces; earned Quickdraw and YOLO badges on GitHub.
